Teaching Progression in Multiplication and Division in KS2

Course Information

Date: 4th December 2020

Venue: Online (Zoom)

Time: 09:15-11:45

Cost: £60

Course Leader: Vanessa Brown

Overview of Training:

This session will explore the use of manipulatives to develop a conceptual understanding of multiplication and division.

Multiplication is so much more than just knowing your times tables. Although knowing multiplication facts is extremely beneficial; it is not the whole story.

From times tables to formal written methods, the training will explore the key ideas behind multiplication; delving into concrete, pictorial and abstract representations, as well as the key laws of mathematics- what are they and why are they important?

The course also provides sequenced steps when teaching long and short division and focuses on the appropriate language and progression of skills.

This session would be suitable for KS2 teachers, teaching assistants and subject leaders who wish to develop their understanding of the progression from mental to written methods of calculation.

Due to current circumstances, you will need to bring your own set of manipulatives: Dienes and/or place value counters, counters (double sided would be perfect).

Bookings can be made by contacting www.teachcr.com or enquiries@teachcr.com
